

ABOUT THE COMPANY

Main objectives

Solving production, flow assurance and well integrity issues, especially corrosion and ARPD

Design, manufacturing and sale of products and anti-corrosion solutions for the oil industry – unique patented technologies

Implementation of the latest unique coating systems for OCTG and effective protection for couplings.

The primary application of majorpack® technology is the protection of downhole tubing, pump rods and couplings, operating in severe conditions, including highly corrosive environments complicated with asphaltene and paraffin deposits.

100%

Quality control of majorpack coatings

18,200

Wells in operation globally with majorpack protective coatings

3,500

Pipes with majorpack coatings are shipped daily

Key benefits

- ARPD control efficiency
- Corrosion control efficiency
- Cost efficiency
- Ample production capacity
- Reducing carbon footprint

TIME TO SAVE

Protecting tubing - protecting nature.

Majorpack® protective coatings for production tubing can save up to 5 kg CO₂ / boe produced when compared to uncoated tubing.

The combination of barrier and protective coating layers supplemented with special protective equipment majorpack Streamer® creates the ultimate multifactor protection system.

Majorpack® multilayer protective systems use a unique, proprietary system made up of a Zn/Fe intermetallic layer and a protective polymer-based layer to provide unparalleled performance.

Corrosion

Abrasion

ARPD

Multilayer protection system designed and manufactured for complete protection of tubing; including threads and external surfaces. Suitable for severely corrosive environments.

Multilayer protection system designed and manufactured for complete protection of tubing; including threads and external surfaces. Especially effective at mitigating asphaltene-resin-paraffin deposits (ARPD).

Multilayer protection system designed and manufactured for complete protection of tubing; including threads and external surfaces. Suitable for severely corrosive environments with additional ARPD issues.

ziPLY ST

Corrosion

Abrasion

Epoxy-phenolic polymer based protective system, designed to protect tubing in environments with excessive asphaltene-resin-paraffin deposits (ARPD).

Epoxy-phenolic polymer based protective system, designed to protect tubing in environments with excessive asphaltene-resin-paraffin deposits (ARPD) and mild corrosion.

Highly effective bimetallic protection system of Fe/Zn intermetallic compound with stainless steel working surface, specially designed for tubing operating in highly aggressive environments, complicated with multiple corrosive factors.

majorpack Streamer®

Special patented device (insert), designed to protect tubing pin end and internal thread connection from corrosion and wash-out arising from the impact of fluid flow on threads.
