

majorpack Streamer - special patented protective device (insert), made for the protection of the end of tubing's nipple and prevent the internal tubing-to-coupling thread connection from corrosion and washing-out as a result of the impact of the flow on the unprotected threaded part of the tubing-to-coupling connection.

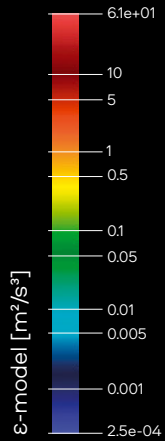

By minimizing and eliminating the clearance of the tubing-to-coupling connection, majorpack Streamer ensures the tightness of the connection, thereby preventing abrasive and erosive wear due to the high velocity of the produced fluid.

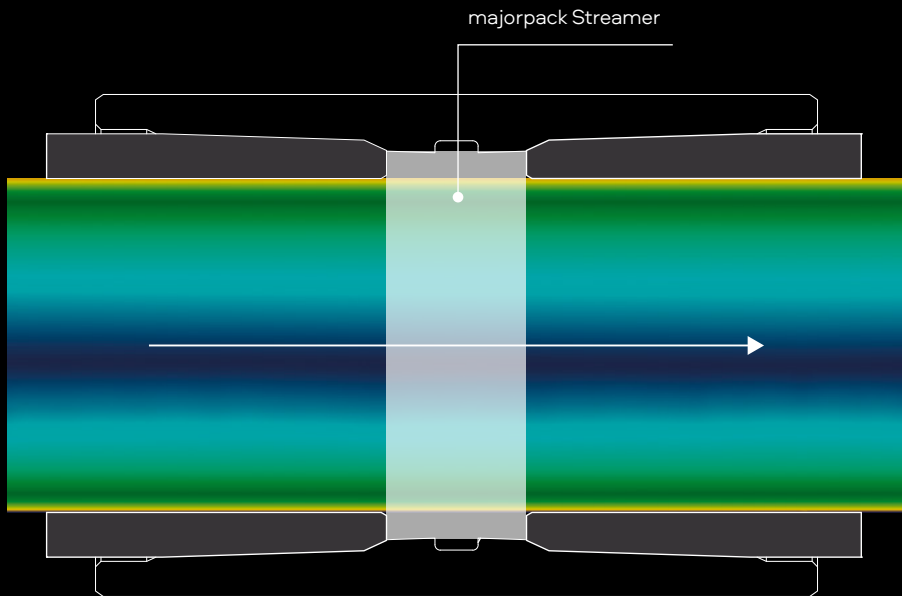

Without  
majorpack Streamer

- Prevents abrasive and erosive wear of a threaded connection
- Minimizes gap between tubings nipples
- Protects tubing pin-ends from well fluids
- Protects the vulnerable inner surface of the coupling from washing-out by flow and corrosion
